Video: The Causes and Treatment of Pain in Scleroderma

Pain is a persistent and difficult problem in scleroderma, affecting function in multiple ways. In this video from the 2014 National Patient Education Conference, Dr. Daniel Furst of UCLA examines the many ways pain can arise from our muscles, tendons, joints, internal organs and brain, and how the treatments are as varied as the causes. Dr. Furst also analyzes ways to deal with living with scleroderma.

Following Lung Transplantation

Patients with end-stage lung disease due to systemic sclerosis should not simply be denied lung transplantation because of short- and long-term survival concerns due to extra-pulmonary factors, according to new research findings presented this week at the American College of Rheumatology Annual Meeting in Boston.

Hospitals may be reluctant to approve lung transplantation in systemic sclerosis patients due to their concerns about extra-pulmonary involvement that might affect the patients’ short- and long-term survival.
